Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

Case Vehicle (A): 1999 Saturn
 Type: SL2, 4-door sedan
 Driver: 46-year-old female
 CDC: 01-FDEW-1, 03-RBLE-1

SITUATION

(Slides 1, 2) On a rainy night, case vehicle (A) was traveling east at a driver-estimated speed of 65 mph (106 kph) in the left lane of a limited-access freeway. The freeway is a 6-lane asphalt road, divided by a concrete barrier between the east and west lanes of travel. The roadway was wet and that portion of the freeway was dark and unlighted. The driver of case vehicle (A) reportedly braked due to slow traffic ahead, and lost control of the vehicle. The vehicle exited the north shoulder in a counterclockwise yaw and struck the concrete median wall with its right bumper corner. After the frontal impact, case vehicle (A) struck the wall again with its right rear corner, where it came to rest against the wall facing west. Case vehicle (A) was towed due to damage and the driver was transported to a local hospital with police reported “C” injuries.

GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 3) The first impact to the front of case vehicle (A) was minor. The direct damage began at the right-front bumper corner and extended 100 cm across the front bumper, resulting in 72-percent vehicle overlap. The maximum crush was 19 cm to the right-front bumper corner. The second impact to the right-rear bumper corner was very minor and resulted in scratches that extended 29 cm along the right side of the bumper cover.

Using the WinSMASH accident-reconstruction program and c-values measured for (slides 4, 5, 6, 7, 8 and 9) case vehicle (A), the following impact severity was calculated for the frontal impact with the median wall.

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	delta V	21 (13)	-15 (-9)	-15 (-9)

DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

Exterior

(Slides 10, 11 and 12) Damage to the front of case vehicle (A) included the bumper, the grille area, and the right headlight assembly. (Slides 13, 14 and 15) The hood was crushed and slightly elevated in the rear, but it did not contact the undamaged windshield. There was no damage to the hood latch or hood hinges.

(Slide 16) On the right side, the front fender was damaged and shifted to the left. (Slide 17) There was no damage to the right-side exterior door panels, and both doors were operational. (Slide 18) Also, there was no damage to the right A-, B-, or C-pillars, or to the right wheels, and there was no change in the right wheelbase. (Slide 19) On the left side, the front fender was deformed and shifted slightly to the left. There was no damage to the left-side door panels, and both left doors were operational. (Slide 20) Also, there was no damage to the A-, B-, or C-pillars, and no change in the left wheelbase.

(Slides 21, 22) There were scratches on the right corner of the rear bumper from contact with the median wall during the second impact. There was no other damage to the rear of case vehicle (A).

Interior

(Slides 23, 24) This vehicle is equipped with steering-wheel and passenger frontal-impact airbags, which deployed during the first impact. (Slide 25) There was no visible evidence of contact on the steering-wheel airbag skin. (Slides 26, 27) There was no damage to the steering-wheel rim and no rotation of the steering column. (Slides 28, 29 and 30) There was no damage to the upper or mid portion of the instrument panel, center dash area, or glove compartment. (Slides 31, 32) There was a scuff mark on the left portion of the knee bolster indicating driver contact, but there was no damage to the panel. (Slides 33, 34 and 35) In addition, there was no damage to the roof, windshield, or A-pillars. (Slide 36) There was a cut in the plastic roof siderail, due to contact by the driver's hand and ring. There was no other interior damage and no intrusions were noted.

OCCUPANT KINEMATICS AND INJURIES

(Slide 37) The 5-ft, 6-in, 130-lb, 46-year-old female driver was wearing the available three-point belt, and the airbag deployed during the frontal impact. (Slides 38, 39) Webbing imprints on the D-ring from the shoulder-belt webbing indicate belt use at the time of the crash. (Slide 40) The shoulder-belt anchor point was adjusted to the highest position on the B-pillar, and the driver reportedly had the seat in a mid seat-track position. She reportedly had her hands at the 10 and 2 o'clock positions on the steering-wheel rim.

During the frontal impact with the median wall, the driver moved forward and to the right relative to the vehicle interior, and into the belt restraint and airbag. (Slide 41) She sustained a contusion to her right hip, probably due to loading by the seatbelt buckle assembly, or possibly from contact with the center console/armrest. (Slide 42) The deploying airbag propelled her left hand upward into the left roof siderail, and her wedding ring gouged the plastic cover. This contact resulted in a contusion to her left ring finger and contusions across her left knuckles. (Slides 43, 44) In addition, she sustained a contusion to her left knee, probably due to contact with the knee bolster, as indicated by scuff marks to the panel.

The following table and attached drawing (slide 45) summarize the injuries for the restrained driver.

Occupant: Driver
 Restraints: 3-point belt worn; airbag deployed

Age: 46 years
 Stature: 168 cm (5 ft, 6 in)

Gender: Female
 Mass: 59 kg (130 lb)

CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.
